## WORK EXPERIENCE

### Full Stack Developer

Willard Batteries | August / 2024 - January / 2025

- Developed functional web applications using PHP (v7.4, v8.2) for the backend, creating dynamic solutions for product and user management. Implemented dynamic interactions and functionalities with jQuery (v1.3, v1.4), enhancing the user experience with interactive effects and form validation.
- I used HTML5 and CSS3 to design and develop clean visual interfaces tailored to the company's requirements, ensuring a responsive and accessible design. Additionally, I employed Bootstrap (v3, v4, v5) to optimize the design and improve development efficiency.
- Developed scalable and optimized solutions on the backend, working closely with the team to create new models and features that improved operational efficiency.

#### Featured projects:

- New Homepage Design: Complete redesign of the company's homepage, improving the usability and aesthetics of the site for a better user experience.
- Development of Specific Modules: Creation of customized modules for product and customer management, optimizing the internal workflow.

### Full Stack Developer

FreeLancer | September / 2023 - July / 2024

- Designed and developed functional web pages with React (v18, v17) and integrated relational databases such as PostgreSQL (v13, v12) and SQL (v8, v5.7), according to client requirements. Implemented custom solutions for e-commerce projects, improving the online shopping experience. Used relational databases to manage data integrity and relationships across systems, ensuring scalability and performance. Developed scalable architectures using frontend and backend integration tools, optimizing compatibility and performance across projects.

#### Featured projects:

- Clothing store e-commerce website: Development of an e-commerce system using React, SQL optimizing the shopping experience and inventory management.

### Front-End Developer

Pivot | August / 2022 - August / 2023

- Developed cross-platform mobile applications with React Native (v0.72, v0.65) and TypeScript (v5.2, v4.4), using the latest versions to improve performance and scalability. Performed efficient deployments using Expo (v49, v42), applying key updates such as Hermes Engine and type management improvements with TypeScript. Implemented intuitive and functional interfaces, prioritizing user experience.

#### Featured projects:

- Mobile Application for Scooter Reservation: Development of a mobile application with React Native and TypeScript, optimized for the management of scooter reservations used on the river boardwalk.
